

# MLLMs for video modality

Vlad Shakhuro

27 March 2025

# Outline

1. Tasks and benchmarks

2. Models

# Video-MME

## Video-MME

On what date did the individual in the video leave a place that Simon thought was very important to him?

- A. May 31, 2022.    B. June 9, 2021.    C. May 9, 2021.    D. June 31, 2021.

The date of **Day 1** is May 31, 2021.

[in Frames]

**Simon** is the camera man.

[in Frames]

**Yosemite National Park** did mean a lot more to Simon. [in Subs/Audio]

Depart Yosemite on **Day 10**.

[in Frames]

Fu et al. Video-MME: The First-Ever Comprehensive Evaluation Benchmark of Multi-modal LLMs in Video Analysis. arXiv:2405.21075

# Video-MME

## Video-MME

How did the man wearing a bandage and holding an envelop, who appeared in the latter part of this video, sustain his injury?

- A. One of his hands was hit by a firework while he was setting it off.
- B. His arms got injured while he was attempting to put out the fire at a burning house.
- C. His hands were injured from falling down to the ground while he was chasing Wayne's motorcycle.
- D. One of his arms was dragged down by a dog lured with food by Wayne, while he was insulting Wayne's father.

Dragged down by a dog.  
[Option D]

The man wearing a bandage  
and holding an envelope.

Chasing Wayne's motorcycle.  
[Option C]

A burning house.  
[Option B]

Hit by a firework.  
[Option A]

# Video-MME

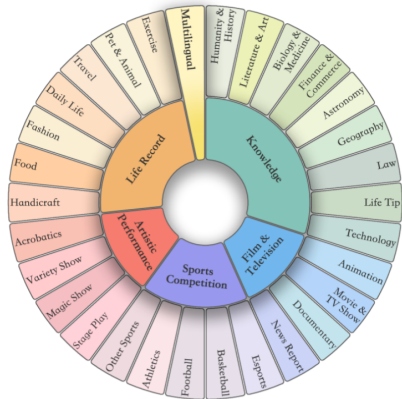

Figure 2: (Left) Video categories. Our benchmark covers 6 key domains and 30 sub-class video types. (Right) Video duration length and question type distributions. Video-MME has a full spectrum of video length and covers different core abilities of MLLMs.

# Video-MME

## Leaderboard

Accuracy scores on Video-MME are presented for short, medium, and long videos, taking the corresponding subtitles as input or not.

**Short Video:** < 2min

**Medium Video:** 4min ~ 15min

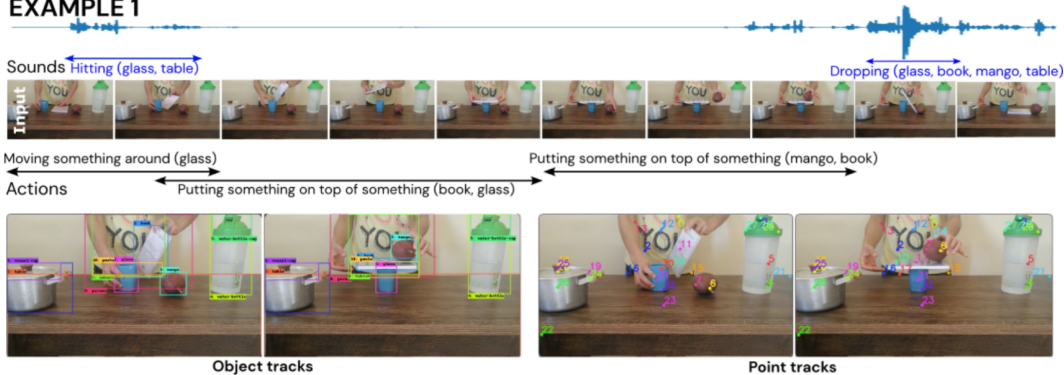

**Long Video:** 30min ~ 60min

By default, this leaderboard is sorted by results with subtitles. To view other sorted results, please click on the corresponding cell.

| # | Model  | LLM<br>Params | Frames                  | Date       | Overall (%) |           | Short Video<br>(%) |           | Medium<br>Video (%) |           | Long Video<br>(%) |           |
|---|--|---------------|-------------------------|------------|-------------|-----------|--------------------|-----------|---------------------|-----------|-------------------|-----------|
|   |  |               |                         |            | w/o<br>subs | w<br>subs | w/o<br>subs        | w<br>subs | w/o<br>subs         | w<br>subs | w/o<br>subs       | w<br>subs |

# PerceptionTest

## EXAMPLE 1

Multiple-choice video QA

**Area:** Physics, Reasoning: Predictive

**Question:** Is the configuration of objects likely to be stable after placing the last object?

**Options:**

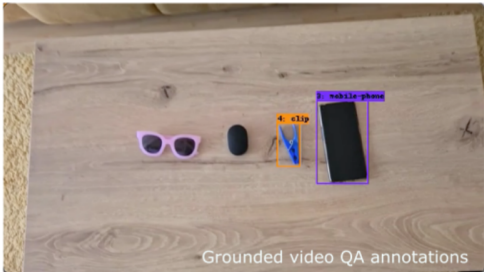

- a) The configuration is likely to be stable.
- b) The configuration is likely to be unstable.
- c) One cannot judge the stability of this configuration.

# PerceptionTest

## EXAMPLE 2

Input

Grounded video QA annotations

**Multiple-choice video QA**  
**Area:** Memory, Reasoning: Explanatory  
**Question:** What changed on the table while the camera was looking away?  
**Options:**  
a) The mobile and clip swapped positions.  
b) The bottle and watch were removed and a clip and mobile were added.  
c) The mobile was added and a clip was removed.

**Grounded video QA**  
**Area:** Memory, Reasoning: Descriptive  
**Question:** Track the objects that were added to the table while the camera was looking away.

# PerceptionTest

## EXAMPLE 3

Multiple-choice video QA

Area: Memory, Reasoning: Counterfactual

Question: If the person had put the objects in the backpack in reverse order, which object or objects would have been put in second?

Options: a) shirt b) pen c) laptop

## EXAMPLE 4

Multiple-choice video QA

Area: Semantics, Reasoning: Explanatory

Question: What action or actions did the person fail to complete and why?

Options:

- a) The person put the teabag next to the cup instead of inside the cup.
- b) The person tried to pour water, but failed because they didn't tilt the container enough.
- c) The person tried to pour water, but failed because the water container seems empty.

## EXAMPLE 5

Multiple-choice video QA

Area: Abstraction, Reasoning: Descriptive

Question: Which letters from the ones the person puts on the table have the same colour?

Options:

- a) EI b) BE c) IK

# PerceptionTest

| (Skill Area) Skill                        | Example of situations and questions or tasks   |
|---|--|
| (M) Visual discrimination                 | Objects are shown in front of the camera, with some shown more than once. <b>Task:</b> Detect which objects were shown multiple times.   |
| (M) Change detection                      | The camera is filming a table, then looks away for a few seconds, then looks back at the table. Some changes may have occurred. <b>Task:</b> Explain what changed.   |
| (M) Sequencing                            | Objects are put in a backpack. <b>Task:</b> List their order.  |
| (M) Event recall                          | A person indicates a region on the table with the hand, then puts objects inside and outside the region. <b>Task:</b> List the objects put inside the region.  |
| (A) Object, action & event counting       | A person turns a lamp on and off. <b>Task:</b> Count the number of times the illumination changed in the scene.  |
| (A) Feature matching                      | A person puts wooden letters on the table. <b>Task:</b> Which letters have the same colour?  |
| (A) Pattern discovery                     | Geometric shapes are shown in a pattern. <b>Task:</b> What shape will be shown next?   |
| (A) Pattern breaking                      | A person puts multiple cups all facing upwards and one facing downwards. <b>Task:</b> Indicate the object that breaks the pattern.   |
| (P) Object permanence                     | A person plays a cups-game with 3-4 cups by hiding a small object under one of the cups, then shuffles the cups. <b>Task:</b> Predict where is the hidden object after shuffling.  |
| (P) Spatial relations & containment       | A person puts a bookmark in a book, then puts the same or another book in a backpack. <b>Task:</b> Where is the bookmark at the end?   |
| (P) Object attributes                     | A person writes on a piece of paper. <b>Task:</b> Is the paper lined or plain?   |
| (P) Motion & occluded interactions        | A person moves an occluder object in front of a small object, sometimes moving also the small (occluded) object. <b>Task:</b> Was the small object moved?  |
| (P) Solidity & collisions                 | A person launches objects against a blocker object, sometimes removing the blocker. <b>Task:</b> Does the object fall off the table?   |
| (P) Conservation                          | A person pours an equal amount of water in 2 identical glasses, then pours all or part of the water from one glass in a taller or wider glass. <b>Task:</b> How much water is in the last glass?   |
| (P) Stability                             | A person puts objects on top of each other in a stable or unstable configuration. <b>Task:</b> Predict if the configuration will be stable after placing the last object.  |
| (S) Distractor actions & objects          | A person makes tea, and does also some distractor actions unrelated to making tea, e.g. rotating a knife. <b>Task:</b> Identify the distractor action(s).  |
| (S) Task completion & adversarial actions | A person ties shoe laces, but sometimes pretends to tie, or ties the lace of one shoe to the lace of the other shoe. <b>Task:</b> Detect if the action is done correctly.  |
| (S) Object & part recognition             | A person conceals a small object in one of their hands, then shuffles the hands. <b>Task:</b> Identify in which hand is the object held.   |
| (S) Action & sound recognition            | All scripts. <b>Task:</b> Detect the actions and sounds in the video from a pre-defined list.  |
| (S) Place recognition                     | All scripts. <b>Task:</b> Detect where is the action taking place.   |
| (S) State recognition                     | A person uses an electric device. <b>Task:</b> Indicate if the device is on.   |
| (S) General knowledge & Language          | Some objects are shown to the camera, some multiple times. <b>Task:</b> Given a list of arbitrary statements or word puzzles, some requiring general knowledge to solve, select the statement that contains a reference to the second distinct object shown. |

Table 2: Examples of scripts probing for different skills in the four areas in the *Perception Test*: (M):Memory, (A):Abstraction, (P):Physics, (S):Semantics.

# PerceptionTest

| Annotation type | # classes | # annot | # videos | Rate (fps) |
|-----------------|-----------|---------|----------|------------|
| Objects tracks  | 5101      | 189940  | 11609    | 1          |
| Point tracks    | NA        | 8647    | 145      | 30         |
| Action segments | 63        | 73503   | 11353    | 30         |
| Sound segments  | 16        | 137128  | 11433    | 30         |
| mc-vQA          | 132       | 38060   | 10361    | NA         |
| g-vQA           | 34        | 6086    | 3063     | 1          |

| Area        | # videoQA  | Reasoning      | # videoQA   |
|-------------|------------|----------------|-------------|
| Memory      | 7256 (36)  | Descriptive    | 31536 (106) |
| Abstraction | 12737 (58) | Explanatory    | 4513 (14)   |
| Physics     | 23741 (80) | Predictive     | 1278 (7)    |
| Semantics   | 24965 (82) | Counterfactual | 733 (5)     |

Table 3: **Top:** Annotations in the *Perception Test*. Each object or point track contains frame-level annotations at a certain *frame rate*, e.g. each point is annotated on every frame, at 30 fps. Action and sound segments are annotated at the original video frame rate. # classes refers to the number of unique object names for object tracks and the number of unique questions for multiple-choice videoQA (mc-vQA) and grounded videoQA (g-vQA). **Bottom:** Number of videoQA pairs and (unique questions) per area and type of reasoning. Note that one question may be counted in multiple areas if it tests more than one skill. Each question is assigned a unique type of reasoning.

# PerceptionTest

| Task                         | Output                  | Metric         | Baseline              | Score |
|------------------------------|-------------------------|----------------|-----------------------|-------|
| Object tracking              | box track               | Avg. IoU       | SiamFC [8]            | 0.67  |
| Point tracking               | point track             | Avg. Jaccard   | TAP-Net [19]          | 0.401 |
| Temporal action localisation | list of action segments | mAP            | ActionFormer [57]     | 15.56 |
| Temporal sound localisation  | list of sound segments  | mAP            | ActionFormer [57]     | 15.46 |
| multiple-choice videoQA      | answer (1 out of 3)     | top-1 accuracy | SeViLA [55]           | 46.2  |
| grounded videoQA             | list of box tracks      | HOTA [40]      | MDETR [34]+Stark [52] | 0.1   |

Table 4: Computational tasks and top-performing baselines in the *Perception Test*: the model receives a video with audio, plus a task-specific input (e.g. the coordinates of a bounding box for the object tracking task), and produces a task-specific prediction, evaluated using dedicated metrics.

# Video-MMMU

Video Lecture

**10s**

**39s**

**293s**

**[In Video Quiz]**

Can you fill in the superscripts and subscripts for the second neuron?

✓  $a_2^{[2]} = g(w_2^{[1]} \cdot a_1^{[1]} + b_2^{[1]})$  ← in-video quiz answer

✗  $a_2^{[2]} = g(w_2^{[1]} \cdot a_1^{[1]} + b_2^{[1]})$  input is  $a_1^{[1]}$  not a single number

**465s**

**[In Video Quiz]**

Can you fill in the superscripts and subscripts for the second neuron?

✓  $a_2^{[2]} = g(w_2^{[1]} \cdot a_1^{[1]} + b_2^{[1]})$  ← in-video quiz answer

✗  $a_2^{[2]} = g(w_2^{[1]} \cdot a_1^{[1]} + b_2^{[1]})$  input is  $a_1^{[1]}$  not a single number

Quiz Time

**Perception**

Can you **identify key information** in the video?

➤ The in-video quiz answer is \_\_\_\_\_. The general formula for the in-video-quiz is \_\_\_\_\_.

✓ I can **perceive** that the quiz answer is  $a_2^{[2]} = g(w_2^{[1]} \cdot a_1^{[1]} + b_2^{[1]})$ . The formula is  $a_j^{[l]} = g(w_j^{[l-1]} \cdot a^{[l-1]} + b_j^{[l-1]})$ .

**Comprehension**

Can you **comprehend the knowledge** introduced in the video?

➤ Based on your understanding, can you fill in the superscripts and subscripts for the neuron in **layer 4**?

✓ I can **comprehend** the general formula. By substituting layer=4, the answer is  $a_1^{[4]} = g(w_1^{[3]} \cdot a^{[3]} + b_1^{[3]})$ .

**Adaptation**

Can you **adapt what you learned** from the video to solve a novel yet related problem?

➤ <Case 1> is NOT covered in the video, can you calculate the output of neuron 4?

✓ I can **adapt** what I learned from the video to solve <Case 1>. The answer is 0.117.

Quiz

<Case 1>

Figure 1. An illustration of **Video-MMMU**: Evaluating the knowledge acquisition capability from videos through three cognitive stages: **1) Perception**: if models can identify key information related to knowledge; **2) Comprehension**: if models can interpret the underlying concepts; **3) Adaptation**: if models can adapt the knowledge from videos to novel scenarios.

(a) Video distribution across disciplines.

(b) QA distribution across types.

(c) QA distribution with respect to audio.

Figure 3. Taxonomy of QA types and video disciplines.

# Video-MMMU

Comparison of  $\Delta_{knowledge}$  between Human and Models

(a) Comparison of  $\Delta_{knowledge}$  (performance improvement in the Adaptation track after watching the video compared to before).

# MLVU

## Holistic LVU

### (a) Topic Reasoning

**Q:** What is the person in the game doing?

- (A) Fighting with a game boss (B) Building an automatic farm  
(C) Exploring a haunted house (D) Designing a character's outfit

### (b) Anomaly Recognition

**Q:** What type of abnormality in this surveillance video?

- (A) Fighting (B) Vandalism (C) Robbery (D) Assault

### (c) Video Summarization

**Prompt:** Please summarize the main content of this video.

**Standard Answer:** The video starts with someone in blue pants entering a bright room, talking to another in a black shirt, and then ...

# MLVU

## Single-Detail LVU

### (d) Needle Question Answering

Q: What is the man in the video doing on the lake shore during the sunny summer?

- (A) Swimming (B) **Catching the drone**  
(C) Sunbathing (D) Launching the drone

### (e) Ego Reasoning

Q: Where was the baking glove before I hung it on the hook?

- (A) **On the kitchen count** (B) By the window  
(C) On the oven (D) In the dishwasher

### (f) Plot Question-Answering

Q: What does the cartoon mouse use to hit the cartoon cat?

- (A) Stick (B) Stone (C) **Vase** (D) Hammer

### (g) Sub-Scene Captioning

**Prompt:** Please describe how the man in the white suit saved the woman wearing red high heels when she was about to fall due to a twisted ankle...

**Standard Answer:** The man in the white suit hooked a tree with one foot and used his hand to grab her, preventing her from falling.

## Multi-Detail LVU

(h) Action Order

**Q:** Order these actions from the video: (1) water skiing, (2) playing trombone, (3) making jewelry.

(A) 1 -> 2 -> 3 (B) 1 -> 3 -> 2 (C) 2 -> 1 -> 3 (D) **2 -> 3 -> 1**

(i) Action Count

**Q:** How many times does the action of "carving a pumpkin" occur in this video?

(A) 0 (B) 2 (C) **4** (D) 6

# FAVOR-Bench

## Close-Ended Evaluation

### Action Sequence (AS)

**Question:** In the video, what is the correct sequence of actions performed by the man in plaid clothes?

- (1) Rise and cheer → Body swaying → Move the sandbag away → Move forward to hug the sandbag, walk around and speak;
- (2) Move the sandbag away → Body swaying → Move forward to hug the sandbag, walk around and speak → Rise and cheer;
- (3) Move forward to hug the sandbag, walk around and speak → Rise and cheer → Body swaying → Move the sandbag away;
- (4) Body swaying → Move the sandbag away → Rise and cheer → Move forward to hug the sandbag, walk around and speak;
- (5) **Body swaying → Rise and cheer → Move forward to hug the sandbag, walk around and speak → Move the sandbag away.**

### Holistic Action Classification (HAC)

**Question:** Based on the overall dynamics of the video, what activity is the woman wearing a tank top primarily engaged in?

- (1) Repeatedly adjusting protective gear;
- (2) **Continuously engaging in boxing training;**
- (3) Intermittently kicking and hitting the sandbag;
- (4) Quickly moving feet to circle the area;
- (5) Interacting with her reflection in the mirror.

### Camera Motion (CM)

**Question:** When the camera moves to the right, on which subject's action does the camera's focus mainly concentrate?"

- (1) The woman keeps practicing boxing movements;
- (2) **The man moves and hugs the sandbag;**
- (3) The movement track of the person in the mirror;
- (4) The swaying state of the sandbag when moved aside;
- (5) The man gets up from the chair and cheers.

### Non-Subject Motion (NSM)

**Question:** Which non-subject element's dynamic change is correlated with the main characters' activities?

- (1) The ceiling fan suddenly speeds up;
- (2) The door in the background closes automatically;
- (3) **The figure in the mirror continues to move;**
- (4) A vehicle brakes abruptly outside the window;
- (5) The poster on the wall falls off.

### Single Action Detail (SAD)

**Question:** In the video, what action did the man in the plaid clothes and gray pants perform on the sandbag?

- (1) Body swaying;
- (2) Stand up and cheer;
- (3) **Move the sandbag away;**
- (4) Practice boxing;
- (5) Shake the sandbag up and down.

### Multiple Action Details (MAD)

**Question:** In the video, what interactions did the man wearing a checkered shirt have with the sandbag at different moments?

- (1) Move forward to hug the sandbag;
- (2) Practice boxing, move the sandbag away, and shake the sandbag up and down;
- (3) Shake the sandbag up and down, practice boxing, and push the sandbag with hands;
- (4) **Move forward to hug the sandbag, push the sandbag with hands, and move the sandbag away;**
- (5) Move forward to hug the sandbag, move the sandbag away, and take off the boxing gloves.

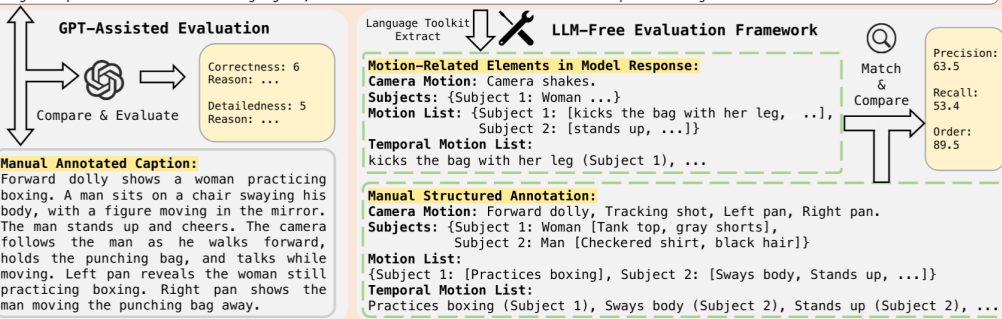

# FAVOR-Bench

## Open-Ended Evaluation

**Prompt:** Please analyze and describe the temporal dynamics in this video, focusing on the camera motions, actions, activities, and interactions rather than the static content.

**Model Response:** The camera shakes as a woman in green pants hits a punching bag with her hands, then turns to the right and kicks the bag with her leg. A man in a checkered shirt stands up and walks to the bag and holds it steady for her. The woman in green pants then kicks the bag again, while the man in the checkered shirt speaks and gestures.

Figure 3: Question types for video question answering in data creation. For each type, we provide its name and an example question.

# LLaVA-Video

## Annotation type 1: detailed description

The video begins with a black screen displaying the text 'Normal People Vs Ultra' in pink and white letters, accompanied by two smiling face emojis. The scene transitions to a modern building with a staircase. Three individuals, dressed in black suits and white sneakers, stand in a line on the stairs. The text 'Normal' appears in a red box at the top left corner. The individuals start walking up the stairs in a synchronized manner, maintaining their formation. The background shows a few people walking and an escalator on the right side of the stairs. The individuals continue to walk up the stairs in a coordinated manner. The scene then transitions to... <omited>

## Annotation type 2: open-ended question

Question: How many steps does "normal people" climb?

Answer: "Normal people" climb 7 steps in the video.

## Annotation type 3: multi-choice question

Question: How many steps does "normal people" climb? A. 5 B. 6 C. 7 D.8

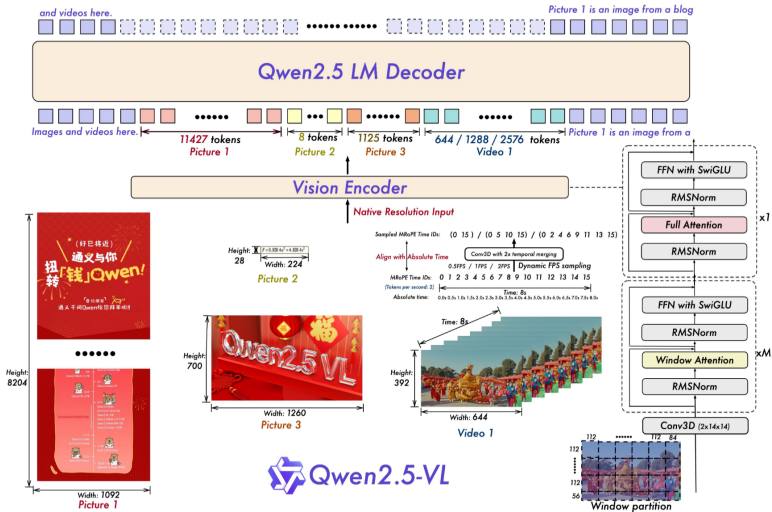

Answer: C.7

Figure 4: One example to illustrate the video instruction-following data.

# QWen2.5-VL

# VideoLLaMA 3

# VideoLLaMA 3

Figure 4: **The calculation flow of our DiffFP.** We prune video tokens based on patch similarities in pixel space, removing patches with smaller distances to the previous frame.

# VideoLLaMA 3

Figure 5: **Data formats for different data types.** ❶ For image sequence, we use "\n" to separate image tokens from different image; ❷ For video sequence, we use "Time: xxs" to indicate timestamps of each frame, "," to separate different frames, and "\n" to separate tokens from different videos; ❸ For streaming video sequence, videos and texts are organized in an interleaved format.

# VideoLLaMA 3

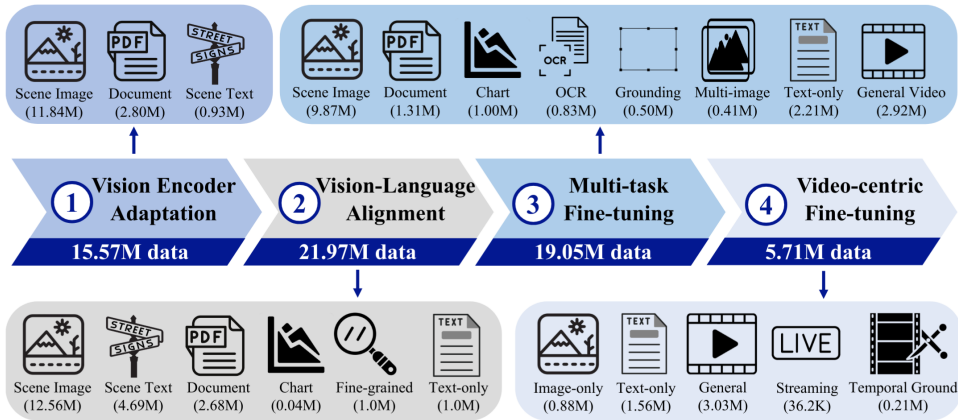

Figure 2: **Training paradigm of VideoLLaMA3.** The training of VideoLLaMA3 has four stages: (1) Vision Encoder Adaptation, (2) Vision-Language Alignment, (3) Multi-task Fine-tuning, and (4) Video-centric Fine-tuning.

# VideoLLaMA 3

# Conclusion

We reviewed following topics:

- **Benchmarking video recognition models.** Currently there are only static benchmarks with close-ended questions. Open-ended questions are rare and measured with GPT-Score or empirical pipelines.
- **Architectures of video LLMs.** LLaVA-like models are prevailing. Since videos are seq. of frames, a lot of attention is paid to the training of a quality visual encoder. After that various adaptor are used to compress video context into reasonable amount of tokens.
